

## INSTRUCTIONS FOR USE

Products offered by **fivetimesone** are made of the best quality wool.  
You are requested to comply with the recommendations concerning their use presented below.

### 1. Cleaning

Wool, being a natural material, breathes and does not absorb dirt.

If the surface of the tuffet is dirty, clean the surface by hand using wool detergent and lukewarm water, rinse thoroughly and dry (leave in a dry and airy place). Stains should be moistened with lukewarm water and wool detergent. Wait until the water absorbs the dirt and then remove it by pressing a delicate dry cloth against the stained place.

If the cushion surface is dirty proceed as above or wash the entire cushion. If the latter option is selected, after washing place the cushion in the washing machine and use the spin-dry cycle. After taking the cushion out of the washing machine, leave it in a dry and airy place.

### 2. Aeration

During the manufacturing process a new technology was used. This technology allows for the production of seamless cushions, i.e. without a replaceable insert. To ensure proper elasticity of the cushion during use, the cushion must be aerated from time to time. This is done by pressing the cushion delicately several times in two directions – along its length and width.

### 3. Shaving

Each product made of natural wool becomes pilled. During use, small balls may appear on the surface of cushions and tuffets. In this case proceed as with sweaters or other woollen products. Use a wool shaver to remove the balls. This action may be repeated many times as the wool layer is thick and very well felted.
